

WARD ANGUS FARMS

2nd Annual Open House

SATURDAY, NOVEMBER 7, 2026

At the farm, Browning, MO

**36 YEARLING & 18-MONTH-OLD
ANGUS BULLS
AND 14 OPEN HEIFERS**

CATTLE AVAILABLE FOR VIEWING AT 10:00 AM, CATTLE SELL AT 1:00 PM

W elcome to the 2nd Annual Ward Angus Farms Open House

We are excited to welcome you back to Ward Angus Farms for our 2nd Annual Open House. After a great first event last fall, we look forward to once again opening our gates, visiting with fellow cattlemen and women, and sharing the cattle we have been working to develop.

For more than 30 years, our family has been blessed with the opportunity to raise Angus cattle and be part of an industry we deeply value. Our focus has remained consistent: produce practical, functional Angus cattle that work for our customers.

Our breeding program is built with the commercial cattleman and woman in mind. We place an emphasis on calving ease, growth, maternal strength, and cattle that can perform in real-world conditions. In our females, we value structural soundness, fertility, longevity, and the ability to consistently raise a productive calf. Those same principles carry into the bulls we develop.

This year, we are proud to offer 36 yearling and 18-month-old Angus bulls along with 14 open heifers. We strive to develop bulls that are sound, efficient, and productive while bringing together the phenotype and performance today's beef industry demands. Whether you are looking for a bull to use on heifers, add pounds at weaning, or build a stronger set of replacement females, our goal is to offer genetics that can contribute to your program for years to come.

More than anything, this open house gives us an opportunity to spend time with the people who make this business worthwhile. We sincerely appreciate our family and friends who help make this event possible and, especially, the customers who place their trust in our program.

On behalf of our family, thank you for taking the time to look through this year's offering. We invite you to join us Saturday, November 7, 2026, at the farm near Browning, Missouri. Cattle will be available for viewing beginning at 10:00 a.m., with the cattle selling at 1:00 p.m.

JEFF WARD: 660-412-2590
JEFFWARD2590@GMAIL.COM

OPEN HOUSE / BID-BOARD SALE

Saturday, November 7, 2026

10:00 AM Cattle available for viewing | Cattle sell at 1:00 PM

Location: 26136 Iron Rd, Browning, MO 64630

HOW THIS SALE WORKS:

- Cattle will be available for viewing at 10AM on Saturday, November 7, 2026.
- Attendees and phone customers will each receive a unique bidder number. Attendees and phone customers will place their selection(s) with us by 1:00 PM.
- Each bull/heifer will have a base price on a bid board.
- For any bull/heifer that have multiple customers interested in them, those buyers will be informed and invited to participate in private bidding for that bull/heifer.
- The price of the bull/heifer will increase in \$100 increments and all parties interested will have the opportunity to say yes or no at each \$100 increment.
- Bulls/heifers will be available for load out sale day so bring your trailers.
- We will have donuts and coffee available in the morning and a light lunch at 12:00.
- Let us know what questions you may have and know that we appreciate your interest in our bulls/heifers.

QUESTIONS & SALE DAY ASSISTANCE

Jeff Ward 660-412-2590
Kade Ward 660-412-3595
Landon Ward 660-734-3485
Christine Ward 660-734-4351
Brett Sayre 573-881-1876
Chris Stallo 816-344-4760

INSPECTION:

Cattle are available for inspection at the farm at any time leading up to the open house and will be on display during the open house. We ask that you give us a call ahead of time to schedule a visit.

SUPPLEMENTAL INFORMATION

EPDS in the catalog are current as of September 30, 2026. A supplement sheet with the most current information, including scrotal measurements, will be available on sale day.

SALE TERMS AND CONDITIONS

All cattle will sell under the terms and recommendations set forth by the American Angus Association.

LIABILITY

All persons attending the sale and related events do so at their own risk. Ward Farms assumes no liability for any accidents or injuries that may occur.

HEALTH

All bulls will undergo a complete Breeding Soundness Exam, including semen testing, prior to the sale. Bulls received Bovi-Shield Vision 8 Somnus with Spur and Pyramid 5 + Prespense at one month of age and again at weaning. Prior to the sale, they will also be given a booster of 8-Way Blackleg and Vibrio-Lepto and poured with Ivermectin. A licensed veterinarian will be on site sale day to assist with any required interstate health certificates.

TRUCKING / HOUSING:

Free delivery is available within 100 miles. For buyers outside that range, we'll work with you to make arrangements.

Bulls may be held at the farm for up to one month if needed. During that time they will run with other bulls, so we recommend buyers obtain insurance.

ANNOUNCEMENTS:

Announcements made on November 7 will take precedence over all printed material.

SAVE \$100

Each bull picked up sale day will receive a \$100 discount.

Purchase 2 or more bulls and receive a 2% discount.

Ownership of bulls transfers at the time of purchase. We recommend buyers consider insurance, which will be available through Conover Auction Service (Jeanne Conover, 515-491-1335).

AMERICAN ANGUS ASSOCIATION

SELECTION TOOLS

Expected Progeny Difference (EPD), is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus. Interim EPDs may appear on young animals when their performance has yet to be incorporated into the American Angus Association National Cattle Evaluation (NCE) procedures. This EPD will be preceded by an "I", and may or may not include the animal's own performance record for a particular trait, depending on its availability, appropriate contemporary grouping, or data edits needed for NCE.

Accuracy (ACC), is the reliability that can be placed on the EPD. An accuracy of close to 1.0 indicates higher reliability. Accuracy is impacted by the number of progeny and ancestral records included in the analysis.

PRODUCTION

Calving Ease Direct (CED), expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

Birth Weight (BW), expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

Weaning Weight (WW), expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

Yearling Weight (YW), expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

Residual Average Daily Gain (RADG), feed efficiency expressed in pounds per day, is a predictor of a sire's genetic ability for post-weaning gain in future progeny compared to that of other sires, given a constant amount of feed consumed.

Dry Matter Intake (DMI), expressed in pounds per day, is a predictor of difference in transmitting ability for feed intake during the post-weaning phase, compared to that of other sires.

Yearling Height (YH), expressed in inches, is a predictor of a sire's ability to transmit yearling height compared to that of other sires.

Scrotal Circumference (SC), expressed in centimeters, is a predictor of the difference in transmitting scrotal size compared to that of other sires.

MANAGEMENT

Claw Set (Claw), expressed in units of claw-set score, a lower EPD is more favorable, indicating a sire will produce progeny with more symmetrical, even and appropriately spaced toes compared to another sire.

Foot Angle (Angle), expressed in units of foot-angle score, a lower EPD is more favorable, indicating a sire will produce progeny with an angle closer to 45 degrees at the pastern and appropriate toe length and heel depth compared to another sire.

Docility (DOC), expressed as a difference in yearling cattle temperament, with a higher value indicating more favorable docility in a sire's offspring compared to another sire.

Pulmonary Arterial Pressure (PAP), expressed in millimeters of Mercury (mmHg), with a lower EPD being more favorable indicating a sire should produce progeny with a lower PAP score to decrease the risk of progeny contracting high altitude disease most commonly experienced at 5,500 ft or greater in elevation.

Hair Shed (HS), expressed in units of hair shed score, with a lower EPD being more favorable. This indicates a sire should produce progeny who shed their winter coat earlier in the spring and has improved environmental adaptability in heat stressed areas and grazing endophyte-infected (hot) fescue.

MATERNAL

Heifer Pregnancy (HP), is a selection tool to increase the probability or chance of a sire's daughters becoming pregnant as first-calf heifers during a normal breeding season. A higher EPD is the more favorable direction, and the EPD is reported in percentage units.

Calving Ease Maternal (CEM), expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf daughters. It predicts the average ease with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.

Maternal Milk (Milk), expressed in pounds of calf weaned, is a predictor of a sire's genetic merit for milk and mothering ability in his daughters. In other words, it is the part of the calf's weaning weight attributes to milk and mothering ability.

Teat Size (Teat), expressed in units of teat size score, with a higher EPD indicating a sire will produce daughters with smaller teat size compared to that of other sires' daughters.

Udder Suspension (UDDR), expressed in units of udder suspension score, with a higher EPD indicating a sire will produce daughters with tighter udder suspension compared to that of other sires' daughters.

Functional Longevity (FL), expressed in number of calves, is a predictor of the number of calves a sire's daughters are predicted to produce by 6 years of age compared to that of other sires' daughters. A higher EPD is the more favorable direction indicating more calves produced on average.

Mature Weight (MW), expressed in pounds, is a predictor of the difference in mature weight of daughters of a sire compared to the daughters of other sires.

Mature Height (MH), expressed in inches, is a predictor of the difference in mature height of a sire's daughters compared to daughters of other sires.

CARCASS

Carcass Weight (CW), expressed in pounds, is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

Marbling (Marb), expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

Ribeye Area (RE), expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

Fat Thickness (Fat), expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

\$VALUE INDEXES

\$Value Indexes, expressed in dollars per head, are multi-trait selection indexes where a higher value suggests more profit. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires if sires were randomly mated to cows and if calves were exposed to the same environment.

Maternal Weaned Calf Value (\$M), expressed in dollars per head, predicts profitability differences in progeny due to genetics from conception to weaning by decreasing mature cow size and improving docility, foot structure and fertility while maintaining weaning weights consistent with today's production.

Weaned Calf Value (\$W), expressed in dollars per head, provides the expected difference in future progeny pre-weaning performance from birth to weaning.

Energy Value (\$EN), expressed in dollar savings per cow per year with a larger value being more favorable. It assesses differences in cow energy requirements, due to maternal milk and mature cow size.

Feedlot Value (\$F), expressed in dollars per head, is the expected average difference in future progeny performance for post-weaning feedlot merit (growth and feed efficiency) compared to progeny of other sires assuming producers retain ownership of cattle through the feedlot phase and sell on a carcass-weight basis.

Grid Value (\$G), expressed in dollars per carcass, is the expected average difference in future progeny performance for carcass grid merit, including quality and yield grade attributes, compared to progeny of other sires.

Beef Value (\$B), expressed in dollars per carcass, represents the expected average differences in the progeny post-weaning performance and carcass value compared to progeny of other sires. This index assumes commercial producers wean all male and female progeny, retain ownership of these animals through the feedlot and sell on a carcass merit grid.

Combined Value (\$C), expressed in dollars per head, which includes all traits that make up both Maternal Weaned Calf Value (\$M) and Beef Value (\$B) with the objective that commercial producers will replace 20% of their breeding females per year with replacement heifers retained within their own herd. The remaining cull heifer and steer progeny are then assumed to be sent to the feedlot where the producers retain ownership of those cattle and sell them on a quality-based carcass merit grid.
